

## JCVGantt 3.3 Release Notes: November 11, 2008

### What's New in JCVGantt v3.3

The following new capabilities have been added to Mindjet JCVGantt v3.3:

<b>Multiple branch selection</b>	Multiple branch selection is now supported so a user may now select multiple branches in MindManager and set them to Show Branch or Hide Branch in JCV Gantt.
<b>MindManager Filter Rules</b>	<p>There is a new checkbox option named "Apply filter rules for MindManager" under MindManager Options on the JCVGantt Pro 3 page.</p> <ul style="list-style-type: none"><li>- If this option is checked (default on installation), all new maps will automatically apply the MindManager filter rules.</li></ul> <p>If the option is unchecked then each new map will have the MindManager filter rules turned off at creation.</p>
<b>MindManager 8 Support</b>	<p>JCVGantt Pro 3.3 supports both MindManager 7 and MindManager 8 and is an upgrade to JCVGantt Pro 3.2.</p> <p>NOTE: If JCVGantt Pro 3.3 is installed with MindManager 8 it will replace the PTM add-in adding the more complete project management features of JCVGantt.</p>

### JCVGantt v3.3 Issues

**Issue:** JCVGantt Pro 3.3 allows a maximum number of 500 tasks to be processed from a given MindManager map.

**Workaround:** None: There is a limit of 500 tasks per map.

**Issue:** Fractional numbers are allowed for durations in JCVGantt but only whole numbers are allowed in the duration field of MindManager for Windows.

**Workaround:** None.

**Issue:** In JCVGantt, setting a given tasks duration to one month and then returning to MindManager and setting the same task to a duration of one month causes some duration calculation errors in JCVGantt and MindManager.

**Workaround:** The current workaround is to use duration in days.
